BASIC-ABSTRACT:

NOVELTY - This invention provides a security net used in manhole,  
that may be  
set stably and securely and allowed to be examined from the top of  
the manhole  
to make sure whether it is set correctly, in which the peripheral  
shape of the  
security net 1, in the form of several grid nets, is subject to be a  
substantially rectangular shape, and a reflect body 4 made of  
synthetic resin  
is installed among the meshes in the corner areas.
